## CUBIX FAUCETS

This collection combines balance and symmetry to create a distinctive and harmonious design. The result is a concept in which simplicity, durability, and technology complement one another perfectly in every bathroom space.

### BENEFITS

#### Water savings

The CUBIX collection is equipped with flow restrictors that help reduce water consumption and promote the responsible use of one of our most valuable natural resources. The flow restriction technology is certified under the European Unified Water Label (UWLA) program, which uses a standardized label to assess the efficiency of individual products in terms of water and energy consumption.

#### Material

The alloys used in the manufacture of these faucets are included in the European Positive List (EPL), confirming that the materials used do not release hazardous substances into drinking water.

#### Energy efficiency and sustainability in projects

Faucets that contribute to achieving BREEAM, LEED, and VERDE sustainable building certifications. These certifications promote reduced water and energy consumption and help create more efficient and sustainable buildings. The products are delivered in sustainable, plastic-free packaging.

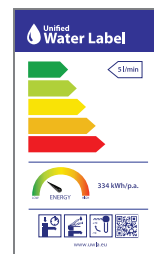

#### Ceramic cartridge Ø 35 mm

The faucets are also equipped with Ø 35 mm ceramic cartridges, which have been tested for more than 1 million operating cycles and offer high resistance to corrosion and limescale buildup.

#### Special surface finish

Thanks to the special composition of the surface finish and a chrome layer whose thickness exceeds the requirements of standard regulations, the faucets are highly resistant to scratching. As a result, they retain their shine and attractive appearance for a long time.

Energy labels for individual products are published [www.uwla.eu](http://www.uwla.eu)

### BASIN MIXER

without waste, flow rate 5 l/min
