Height: 460 mm.

Technical drawings

The wall-hung toilet Deep by JIKA with an extended length of 700 mm is suitable for bathrooms without barriers. However, its appearance is as clean as possible and its surroundings are very easy to keep clean. The installation height of the bathroom equipment must correspond to the valid regulations on the barrier-free use of buildings in the country in question. For the wall-hung toilet, we recommend ordering a seat without a cover for the toilet and an Universum folding assembly in polished stainless steel design. The toilet can be combined with remote button for handicap system (H895643). It meets the requirements of Decree No. 398/2009 Coll., on general technical requirements ensuring the use of buildings by persons with limited mobility and orientation. We provide an extended warranty of 10 years for JIKA ceramic products. Available 3Q 2024.
